Price

Sold**Item Reference: SA1052034****Date of manufacture: 1960**

Dimensions

Height = 34 cm (13.4")

Width = 22 cm (8.7")

Depth = 16 cm (6.3")

Description

A beautiful Atmos Clock By Jaeger LeCoultre numbered 120482, with a square dial with gilded Arabic numerals and batons and smoked tip hands. Unusually this clock still has its original gilded wall bracket finished in a combination of grained and burnish gold plate. This example dates from 1960 and the mechanism is housed in a gilt brass case with a brushed pedestal. The glass sides allow you to see the ingenious movement for all angles. These Atmos Clocks come in variety of designs, and this stylish example of Mid-Century design is one of our favourites. The 'Atmos', first invented in 1928, has no external power source and never needs to be wound by hand. It isn't powered by a suspended weight, as most pendulum clocks are. The Atmos clock gets its power from minute changes in atmospheric temperature, hence its name. Within a sealed capsule, a mixture of gases expand and contract with each temperature change. This is how the mechanism winds naturally without any human intervention. This clock has been overhauled and comes with our 2 year guarantee.

Internal Ref: 299
