

SA109330

Regulator Grandfather Clock by Stephenson of Warminster

Price

Sold**Item Reference: SA109330****Date of manufacture: 1800**

Description

An interesting and impressive Regulator longcase clock with rare centre date feature. The substantial 8 day duration movement with shouldered plates, six spoke wheel work, six large plate pillars, deadbeat anchor escapement, maintaining power and with beat adjustment to the top of the pendulum. The seatboard fitted with a mechanism to allow the brass weight to travel left of centre, thus giving you a clear view of the Mercurial pendulum which is hung from the backboard of the case. The 13" silvered brass dial with two winding holes, one of which is simply to balance the dial and is not actually a working part of the clock. The typical engraved regulator layout for hours, minutes and seconds are displayed on the dial but unusually a date has also been engraved within the minute ring. The superb flame mahogany case elaborately decorated with carved mounts, a glazed trunk door with canted corners to the side and a veneered backboard incorporating a silvered brass beat scale. The flame mahogany case also with carved mounts and single plinth with pads to each corner. The hood again with canted corners, carved mounts, crested top and a glazed access door for the dial. Height...
