Date of manufacture: 1920

Dimensions

Height = 16.5 cm (6.5")

Width = 44 cm (17.3")

Depth = 19 cm (7.5")

Description

This superb finely detailed model of an 18th century cannon is very well engineered. It has large distinctive front spoked wheels with studded traction around the outer rim and a similar small rear version to aid movement. The plain robust carriage supports the large decorative ring turned barrel which has a row of circular handles down each side for transporting or pulling. The model is displayed on a very pleasing stepped and moulded hardwood base which is mounted with a small group of cannon balls under the barrel and finished around the outer edge with shaped bronze pillars and a perimeter chain. This very fine model is in excellent original condition. The bronze has a greenish brown patina and the wooden base which appears to be made from solid figured teak has a rich colour and patination. English, circa 1920. Height 16.5cm x width 44cm x depth 19cm
