Item Reference: SA1177697

Date of manufacture: 1920

Dimensions

Height = 5 cm (2.0")

Width = 22 cm (8.7")

Depth = 22 cm (8.7")

Description

A good example of an Azimuth Circle dating from the early 20th Century. This navigational instrument is used with a compass to measure the horizontal direction of an object or celestial body. In marine navigation this is used to help determine a ship's position and plot its course. The instrument is contained within its original good quality wooden box with sliding lid. It has a makers label on the top for "Dobbie McInnes & Clyde Ltd. Marine & Mechanical Makers to the British Admiralty, Glasgow". It is in good condition for its age. There are some signs of age and use, a few small knocks and marks but nothing detrimental and the folding sight lines open smoothly. The box is sturdy with a lovely patina. Approximate Measurements : Diameter : 7 1/2" / 19cm Box : 8 3/4" / 22cm square x 2" / 5cm high The best description comes from the photos so please look at them all carefully and if you have any questions just ask. Tracked UK Delivery £8
