

Sold

Date of manufacture: 1800

Depth = 7 cm (2.8")

A rare Georgian angle or 'sign post' stick barometer. A fine mahogany case with parquetry fan inlays. A stepped base with opening door to the bulb cistern. A very well engraved silvered scale with slide scale indicator at the top. Circa 1800. The angle barometer was invented around 1680 and was a way of 'scale magnification' and showed the movement of weather in greater detail. These inclined stick barometers are seldom seen and this is a very good example. Height 36" / 91 cms Width 29" / 74 cms Depth 3" / 7 cms From Kembery Antique Clocks Ltd you can expect a genuine barometer has been serviced, calibrated and is guaranteed. We personally deliver and set up for you in the UK.
