Description

Decorative C19th William IV period mahogany occasional or lamp table with rare and unusual inset specimen marble "turtle-stone" top. Circular-topped mahogany table raised on a faceted tapering column with a moulded collar onto a tri-form base on compressed bun feet. The circular moulded edge top with a fine geological specimen of a 'septarian nodule' or "turtle-stone" roundel. The geological phenomena of septarian nodules, were formed from Oxford Clay during the Cretaceous Period around 100 million years ago. A rare, decorative and practical table in excellent original condition with no damage or repairs. The stone top of striking form and colour-way. The mahogany base and frame of the table in good original condition with a gently faded colour and patina. H 30" W 19" D 19" Diameter of stone inset 10.5" England c.1835

Internal Ref: ML 186
