Dimensions

Height = 34 cm (13.4")

Width = 21 cm (8.3")

Depth = 18 cm (7.1")

Description

A mahogany electric five glass Eureka clock with signed enamel Roman dial, the movement numbered 8975 and stamped PATENT NO. 14614, 1906. MADE IN ENGLAND. The Eureka mantel timepiece was invented by Timothy Bernard Powers of New York shortly after 1900 and patented in 1906. The Eureka Clock Company in London, England made these clocks between 1908 and 1914, and it is thought that around 10,000 were made. The company closed 1914. The clock runs on a single 'flag cell' battery at 1.5v but we are in the process of converting it to take a more stable 1.5V output to achieve high accuracy of time keeping. The clock is in remarkable condition and is a little piece of the clock making history which is often forgotten. Please come and view this interesting clock in our showrooms.

Internal Ref: Eureka
