Price

Sold**Item Reference: SA665472****Date of manufacture: 1850**

Dimensions

Height = 188 cm (74.0")

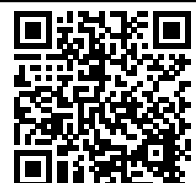

Description

A very small and high quality Domestic Regulator by these Clockmakers to the Royal family. The 8 day duration movement striking the hours unusually on a gong with Deadbeat Escapement and Harrison Maintaining Power. The round silvered brass dial showing seconds and set within a circular gilt wooden sight ring. Also with matching blued steel hands and signed by the maker to the centre of the dial - Brysons, Edinburgh. The wooden pendulum rod is hung from the rear of the case from a substantial cast iron bracket. The large pendulum bob is held in place with two regulation nuts. The movement also features an unusual weight driving mechanism that positions the square lead weights to the internal sides of the case which hides them from view. This gives the impression that the clock is running with no visible form of power as only the pendulum can be seen through the glazed trunk door. The very rare burr walnut case features a glazed trunk door with a walnut veneered backboard and canted corners. The burr walnut is displayed virtually throughout the whole of the front elevation of the case. The base stands on a single plinth. The hood also with canted corners and a lockable ...
