Date of manufacture: 1900

Dimensions

Height = 12 cm (4.7")

Width = 25 cm (9.8")

Depth = 12 cm (4.7")

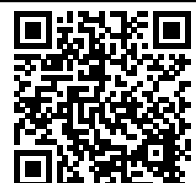

Description

A fantastic electric shock machine dating from the late 19th / early 20th century. It is contained in its original wooden box with its original probes. There is a wooden winding handle which attaches to the front of the box and turns the coil next to the magnet to induce the current. On each side of the box are terminals where the metal probes are connected. It has its original paper label below the lid. I have not attempted to test the machine as far as whether it generates a shock and it is being sold as seen. However I can confirm that all the parts move as they should and when a voltmeter is used on the terminals it does produce a current. It is in good condition for its age and displays well. It has been cleaned and lightly polished and the box has been given a light wax to retain its aged patina. The box has picked up some scuffs and knocks and minor splits over the years but no major damages. The drive band connecting the wheel to the coils is strong and still turns well. The wires on the probes are slightly frayed and there is no key to the box. The best description comes from the photos so please look at them all carefully and if you have any questions just as...
